

Installation of Danske Bank File Plugin

Follow the steps below in order to install Danske Bank File Plugin on a Windows machine. The plugin can be used by all users on the machine after installation.

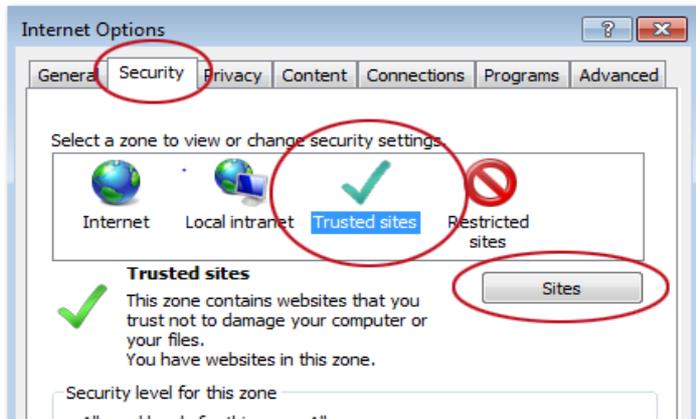

- Unzip the downloaded zip file
- The zip file contains a Windows installer package (msi). Right-click and select Properties and Digital Signatures, in order to validate that the file has been created by Danske Bank:

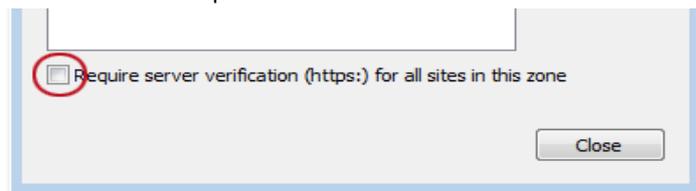

- All users must log off the Windows machine before the installation
- If Danske Bank File Plugin is already installed, it must be uninstalled. This is done from the program list in the Windows Control Panel:

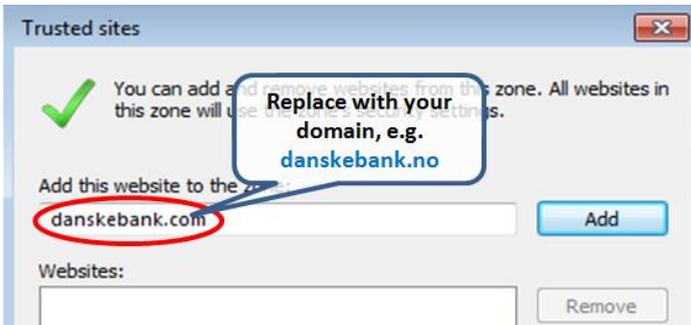

- Install Danske Bank File Plugin by running the downloaded msi file. The installation requires administrative privileges.
- If the plug-in is to be used in Internet Explorer, Trusted Sites must be configured for all users:
 - a. Open Internet Explorer and select Tools and Internet Options
 - b. Go to the Security tab, click Trusted Sites and click Sites

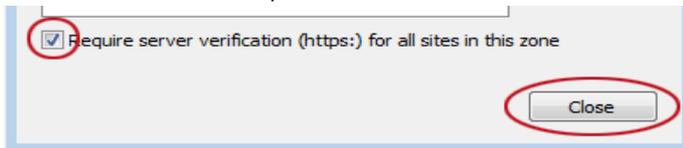

- c. Uncheck the Require Server Verification box...

- d. Enter the domain that will be used, e.g. danskebank.com, danskebank.co.uk or danskebank.ie, and click Add

- e. Re-check the box Require Server Verification... and click Close

- f. Restart Internet Explorer

- Test: The zip archive contains the file *Test-Plugin.html*. Open this file in a browser in order to check that the plug-in works correctly.
